Embedded Linux Development Using Eclipse Doug Abbott, 2008-11-13 The Eclipse environment solves the problem of having to maintain your own Integrated Development Environment IDE which is time consuming and costly Embedded tools can also be easily integrated into Eclipse The C C CDT is ideal for the embedded community with more than 70% of embedded developers using this language to write embedded code Eclipse simplifies embedded system development and then eases its integration into larger platforms and frameworks In this book Doug Abbott examines Eclipse an IDE which can be vital in saving money and time in the design and development of an embedded system Eclipse was created by IBM in 2001 and then became an open source project in 2004 Since then it has become the de facto IDE for embedded developers Virtually all of the major Linux vendors have adopted this platform including MontaVista LynxWorks and Wind River Details the Eclipse Integrated Development Environment IDE essential to streamlining your embedded development process Overview of the latest C C Developer s Toolkit CDT Includes case studies of Eclipse use including Monta Vista LynxWorks and Wind River

Computational Technologies Petr N. Vabishchevich, 2014-12-11 In this book we describe the basic elements of present computational technologies that use the algorithmic languages C C The emphasis is on GNU compilers and libraries FOSS for the solution of computational mathematics problems and visualization of the obtained data At the beginning a brief introduction to C is given with emphasis on its easy use in scientific and engineering computations We describe the basic elements of the language such as variables data types executable statements functions arrays pointers dynamic memory and file management After that we present some observations on the C programming language We discuss the issues of program compiling linking and debugging A quick guide to Eclipse is also presented in the book The main features for editing compiling debugging and application assembling are considered As examples we solve the standard problems of computational mathematics operations with vectors and matrices linear algebra problems solution of nonlinear equations numerical differentiation and integration interpolation initial value problems for ODEs and so on Finally basic features of computational technologies are illustrated with model problems All programs are implemented in C C with using the GSL library Gnuplot is employed to visualize the results of computations [Handbook of Research on Open Source](#)
