Deepwater, AI, 2025-02-18 Corporate Open Source examines the growing trend of major software companies contributing to open source projects and its impact on innovation developer ecosystems and the broader technology landscape The book highlights how strategic corporate involvement can foster innovation and enhance brand reputation Interestingly open source development has shifted from being primarily driven by individual enthusiasts to a mainstream practice where corporations play a dominant role The book explores the motivations behind corporate open source initiatives the organizational structures that enable successful contributions and the resulting impact on developer ecosystems It emphasizes the importance of balancing business interests with genuine community engagement Through case studies and research the book demonstrates that a purely self serving approach can backfire alienating developers and undermining the potential benefits The book begins by introducing core open source concepts and then explores corporate motivations models and ethical considerations This approach provides a comprehensive analysis of the interplay between corporate strategy and community values making it valuable for software developers technology managers and business executives seeking to understand the evolving dynamics of technology management and business management in the open source world

Simulation, Modeling, and Programming for Autonomous Robots Noriako Ando, Stephen Balakirsky, Thomas Hemker, Monica Reggiani, Oskar von Stryk, 2010-11-05 Why are the many highly capable autonomous robots that have been promised for novel applications driven by society industry and research not available day despite the tremendous progress in robotics science and systems achieved during the last decades Unfortunately steady improvements in specific robot abilities and robot hardware have not been matched by corresponding robot performance in real world environments This is mainly due to the lack of advancements in robot software that master the development of robotic systems of ever increasing complexity In addition fundamental open problems are still awaiting sound answers while the development of new robotics applications suffers from the lack of widely used tools libraries and algorithms that are designed in a modular and performant manner with standardized interfaces Simulation environments are playing a major role not only in reducing development time and cost e.g. by systematic software or hardware in the loop testing of robot performance but also in exploring new types of robots and applications However their use may still be regarded with skepticism Seamless migration of code using robot simulators to real world systems is still a rare circumstance due to the complexity of robot world sensor and actuator modeling These challenges drive the quest for the next generation of methodologies and tools for robot development The objective of the

International Conference on Simulation Modeling and Programming for Autonomous Robots SIMPAR is to offer a unique forum for these topics and to bring together researchers from academia and industry to identify and solve the key issues necessary to ease the development of increasingly complex robot software
