

Motor Acceleration Analysis

The purpose of this tutorial is to introduce the Motor Acceleration module of ETAP. It will show the static and dynamic models that can be used to simulate real motor characteristics. The minimum amount of data necessary to run each type of study will be entered. You will need to contact OTI with your Return Key Code so that you can activate this module. For this section of the tutorial you should select "Example Project (ANSI)" option when starting ETAP Demo.

Running a Static Motor Starting Study

- Switch to Motor Acceleration Analysis mode by clicking on the Motor Acceleration Analysis button on the Mode toolbar.

- From the Study Case toolbar, open the Motor Starting Study Case editor. From here you can add and modify conditions for your study.

- On the Event page, change the Total Simulation Time to 10 seconds. The output plots will now graph the results of the study from time 0 to 10 seconds.
