Michel-Trapaga,2003 <u>Forensic Analysis of the Skull</u> Mehmet Yasar Iscan,Richard P. Helmer,1993-11-08 This engrossing

book offers detailed coverage of forensic implications and methods of craniofacial identification Race sex and age morphology are explored along with video superimposition and computer imaging techniques Several case studies are also included **Towards Automation of Forensic Facial Reconstruction** Hemant Narendra Khatod,2004 **Forensic Facial Reconstruction Using 3-D Computer Graphics** Maria Vanezis,2008 This thesis is concerned with computerised forensic 3 D facial reconstruction as a means of identification and involves the restoration of the face on the skull in an attempt to achieve a close likeness of the individual when alive The reconstruction process begins with the biological identification of the skeletal remains age sex ancestry and build Facial reconstruction is then carried out and essentially works by building the face up from the skull using soft tissue thicknesses at specific locations from existing data However it is used as a last resort on skeletonised badly decomposed or mutilated corpses when no other information is available even then it is only accepted as corroborative evidence in court It is performed in the hope that it may stimulate recognition and consequently narrow the field of identification allowing other tests to be carried out such as radiographic and or dental comparisons DNA analysis or other means to establish positive identification The advantages of the computerised method over the manual clay reconstruction are speed rapid editing capability production of images that can be stored and reconstructions repeated at any time if required Furthermore in many cases the original skull instead of a cast or model may be used for reconstruction because the 3 D computerised procedure is rapid and non invasive However the most significant advantage of this technique with regard to the aims and objectives of the thesis is that a number of alternative reconstructions may be produced sequentially for the same skull by using different facial templates from the database that meet the anthropological biological criteria of the skull The issues addressed by the study and therefore its main aims are a evaluation and b improvement of the reliability of facial reconstruction using 3 D computer graphics *Forensic Facial Reconstruction Using Three-dimensional Computer Modelling Techniques* ,2006 Artistic and Observer Bias in Forensic Facial Reconstruction Gloria Louise Nusse,2010 Forensic Art Essentials Lois Gibson,2010-07-27 Forensic Art Essentials teaches artists to extract information from a witness or victim about a face they have seen and produce an image good enough to lead detectives to the criminal being described After reading this book anyone with adequate drawing skills will be able to learn the tools necessary to develop his or her skills as a forensic artist Instruction focuses on an explanation of techniques for various scenarios and includes the use of case studies of special situations and how they should be handled The book covers skull reconstructions of unidentified murder victims and age progressions to aid in the apprehension of known fugitives It also provides step by step illustrations of how to reconstruct a face from a skull and offers solutions to a multitude of common problems that occur in the field With 500 full color illustrations this book is an essential tool for any forensic artist Provides insight as to the best way to responsibly interview and extract information from eye witnesses and victims to develop accurate composite sketches 500 illustrations many full color show examples of various challenges in

developing sketches and reconstructing from skulls Serves as a guide for forensic art professionals as well as a call to law enforcement agencies to expand the use of this valuable forensic tool   **Reconstructing the Past** Kayla Zatezalo,2016 The purpose of this project was to learn about forensic sculpting and compare the results with artistic sculptures I have executed in the past For this project I wanted to learn about Forensic Facial Reconstruction also referred to as Facial Approximation I was interested in exploring what made a forensically accurate sculpture I also wanted to explore the concept of ethnic bias and how it affects an artist s portrayal of their subject Cultural relativism is an important theme in modern anthropological study especially because most early Anthropologists were biased toward their own cultures and because they compared the peoples they were studying to Western cultural models The purpose of this project was to examine my own cultural and ethnic biases and how they applied to my artistic body of work I wanted to work with Dr Spurlock and learn the forensic sculpting process because the data sets used to construct the features along with the underlying structure of the skull would work together to help me sculpt a face despite the cultural biases that I held Figurative sculpture is a discipline in which I have a considerable amount of experience Like many artists I have reviewed my body of work and found that many of my figures exhibit a bias in some ways they look like me and what I culturally consider to be the ideal beauty standard As Karen Taylor states although we may not want to admit it for each of us the ideal face is the one we have seen in the mirror all of our lives It is an age old struggle for artists to avoid incorporation of their own features in their work Taylor 2001 85 All of the faces I have sculpted so far are somewhat feminine and display Caucasian features Seeing how my bias had a tendency to affect my work I understood why it was important for me to examine the culture of Pueblo Man This way I could get a better feel for his history I could then put some of that information into the reconstruction With this project I wanted to really reconstruct the past not just create another figurative sculpture This sculpture of a Pueblo man was built on a skull cast obtained from the France Casting Lab an American company in Colorado The cast is an exact replica of a Pueblo Indian skull When choosing a skull for reconstruction I wanted to choose an individual with a life drastically different from my own and deliberately selected an older male of a different ancestry I would have preferred to recreate a face from a native of the Ohio area I had hoped to take this opportunity to learn about the people that originally inhabited this area and to put a face and a story to the people that my ancestors ultimately displaced However I could not find any skulls or skull casts from the Ohio region that matched the quality needed to make an appropriate sculpture   **Forensic Facial Reconstruction Using Three-dimensional Computer Modelling Techniques** Stephanie L. Davy,2008   <u>Human Facial Soft-tissue Thickness and Its Value in Forensic Facial Reconstruction</u> Meirawaty Meiya Sutisno,2003
