McComb, 2015-07-28 Shortlisted for the 2018 TWS Wildlife Publication Awards in the authored book category In recent years conflicts between ecological conservation and economic growth forced a reassessment of the motivations and goals of wildlife and forestry management Focus shifted from game and commodity management to biodiversity conservation and ecological fore **Chequamegon-Nicolet National Forest (N.F.), Twin Ghost Project**, 2010 *Mammal Community Dynamics* Cynthia J. Zabel, Robert G. Anthony, 2003-09-18 Conservation of mammals in the coniferous forests of western North America has shifted in recent years from species based strategies to community and ecosystem based strategies resulting in an increase in the available information on mammalian communities and their management This book provides a synthesis of the published literature on the role of forest mammals in community structure and function with emphasis on their management and conservation In addition to coverage of some of the charismatic megafauna such as grizzly bears gray wolves mountain lions elk and moose the book also provides a thorough treatment of small terrestrial mammals arboreal rodents bats medium sized carnivores and ungulates The unique blend of theoretical and practical concepts makes this book equally suitable for managers educators and research biologists who will find it a valuable reference to the recent literature on a vast array of topics on mammalian ecology *Designing Greenways* Paul Cawood Hellmund, Daniel Smith, 2013-03-05 How are greenways designed What situations lead to their genesis and what examples best illustrate their potential for enhancing communities and the environment Designing greenways is a key to protecting landscapes allowing wildlife to move freely and finding appropriate ways to bring people into nature This book brings together examples from ecology conservation biology aquatic ecology and recreation design to illustrate how greenways function and add value to ecosystems and human communities alike Encompassing everything from urban trail corridors to river floodplains to wilderness like linkages greenways preserve or improve the integrity of the landscape not only by stemming the loss of natural features but also by engendering new natural and social functions From 19th century parks and parkways to projects still on the drawing boards Designing Greenways is a fascinating introduction to the possibilities and pitfalls involved in these ambitious projects As towns and cities look to greenways as a new way of reconciling man and nature designers and planners will look to Designing Greenways as an invaluable compendium of best practices **Shasta-Trinity National Forest (N.F.), Gemmill Thin Project**, 2009 *Practical Conservation Biology*

Lindenmayer, Jerry F. Franklin, 2013-04-10 While most efforts at biodiversity conservation have focused primarily on protected areas and reserves the unprotected lands surrounding those areas the matrix are equally important to preserving global biodiversity and maintaining forest health In *Conserving Forest Biodiversity* leading forest scientists David B. Lindenmayer and Jerry F. Franklin argue that the conservation of forest biodiversity requires a comprehensive and multiscaled approach that includes both reserve and nonreserve areas They lay the foundations for such a strategy bringing together the latest scientific information on landscape ecology forestry conservation biology and related disciplines as they examine the importance of the matrix in key areas of ecology such as metapopulation dynamics habitat fragmentation and landscape connectivity general principles for matrix management using natural disturbance regimes to guide human disturbance landscape level and stand level elements of matrix management the role of adaptive management and monitoring social dimensions and tensions in implementing matrix based forest management In addition they present five case studies that illustrate aspects and elements of applied matrix management in forests The case studies cover a wide variety of conservation planning and management issues from North America South America and Australia ranging from relatively intact forest ecosystems to an intensively managed plantation *Conserving Forest Biodiversity* presents strategies for enhancing matrix management that can play a vital role in the development of more effective approaches to maintaining forest biodiversity It examines the key issues and gives practical guidelines for sustained forest management highlighting the critical role of the matrix for scientists managers decisionmakers and other stakeholders involved in efforts to sustain biodiversity and ecosystem processes in forest landscapes **Canadian Journal of Forest Research**, 2008 *Forest Wildlife-habitat Relationships* Stephen DeStefano, Robert G. Smith, 2004 **Biodiversity and Conservation: Causes and consequences of biodiversity loss 1 : development, habitat loss and invasive species** Richard J. Ladle, 2009 Although biodiversity is a relatively new coinage scientists have been studying the subject it describes long before the word's first appearance in the language in the mid 1980s In 1973 for instance the UK Systematics Association held a symposium on The Changing Flora and Fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities a conclusion also

reached said the symposium at a meeting of the Linnaean Society some forty years earlier By 1980 the Global 2000 Report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity Indeed especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992 conserving biodiversity has become the principal focus of the global conservation movement Indeed the study of the origins maintenance and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies It is increasingly taught and studied in universities and other research institutions around the world Addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature Biodiversity and Conservation is a new title in the Routledge series Critical Concepts in the Environment Edited by Richard Ladle of Oxford University s Centre for the Environment this new Major Work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates
