Formation Stars Stahler:

The Formation of Stars Steven W. Stahler, Francesco Palla, 2008-07-11 This book is a comprehensive treatment of star formation one of the most active fields of modern astronomy The reader is guided through the subject in a logically compelling manner Starting from a general description of stars and interstellar clouds the authors delineate the earliest phases of stellar evolution They discuss formation activity not only in the Milky Way but also in other galaxies both now and in the remote past Theory and observation are thoroughly integrated with the aid of numerous figures and images In summary this volume is an invaluable resource both as a text for physics and astronomy graduate students and as a reference for professional scientists

The Birth of Star Clusters Steven Stahler, 2017-11-04 All stars are born in groups The origin of these groups has long been a key question in astronomy one that interests researchers in star formation the interstellar medium and cosmology This volume summarizes current progress in the field and includes contributions from both theorists and observers Star clusters appear with a wide range of properties and are born in a variety of physical conditions Yet the key question remains How do diffuse clouds of gas condense into the collections of luminous objects we call stars This book will benefit graduate students newcomers to the field and also experienced scientists seeking a convenient reference

Comets II M. Festou, H. U. Keller, Harold A. Weaver, 2004-11 The study of comets is a field that has seen tremendous advances in recent years far surpassing the knowledge reflected in the original Comets volume published as part of the Space Science Series in 1982 This new volume with more than seventy contributing authors represents the first complete overview of comet science in more than a decade and contains the most extensive collection of knowledge yet assembled in the field Comets II situates comet science in the global context of astrophysics for the first time by beginning with a series of chapters that describe the connection between stars and planets It continues with a presentation of the formation and evolution of planetary systems enabling the reader to clearly see the key role played in our own solar system by the icy planetesimals that were the seeds of the giant planets and transneptunian objects The book presents the key results obtained during the 1990s in particular those collected during the apparition of the exceptional comets C Hyakutake and C Hale Bopp in 1996 1997 The latest results obtained from the in situ exploration of comets P Borrelly and P Wild 2 are also discussed in detail Each topic is designed to be accessible to students or young researchers looking for basic yet detailed complete and accurate information on comet science With its emphasis on the origin of theories and the future of research Comets II will enable scientists to make connections across disciplinary boundaries and will set the stage for discovery and new understanding in the coming years

planets Protostars and Planets IV brings together 167 authors who report on the most significant advances in the field since the publication of the previous volume in 1993 Protostars and Planets IV reflects improvements in observational techniques and the availability of new facilities such as the Infrared Space Observatory the refurbished Hubble Space Telescope and the 10 m Keck telescopes Advances in computer technology and modeling methods have benefited theoretical studies of molecular clouds star formation and jets and disks while recent analyses of meteorites yield important insights into conditions and processes within our Sun s early protoplanetary disk The 49 chapters describe context and progress for observational and theoretical studies of the structure chemistry and dynamics of molecular clouds the collapse of cores and the formation of protostars the formation and properties of young binary stars the properties of winds jets and molecular outflows from young stellar objects the evolution of circumstellar envelopes and disks grain growth in disks and the formation of planets and the properties of the early Solar nebula Protostars and Planets IV is also the first book to include chapters describing the discoveries of extrasolar planets brown dwarfs and Edgeworth Kuiper Belt objects and the first to include high resolution optical and near infrared images of protoplanetary disks Protostars and Planets IV is an unsurpassed reference not only for established researchers but also for younger scientists whose imagination and work will lead to tomorrow s discoveries

The Origin and Evolution of the Universe Ben Zuckerman,Matthew Arnold Malkan,1996 The study of the origin and evolution of the universe encompasses many of the most fascinating questions in science What is our place in the universe How did everything in it get started from galaxies and stars to planets and people And what does the future hold for our star and our universe Recently scientists have made remarkable advances in providing concrete answers to these profound questions The new technologies of observational astronomy with its ground and space based gamma ray X ray ultraviolet infrared and radio telescopes is truly producing a new golden age of discovery This book presents the excitement of these new discoveries in the larger context of cosmic evolution The distinguished contributors are leading researchers at the cutting edge of these fields and they also excel in explaining these subjects to the broader public They offer the latest insights into these rapidly advancing fields covering the origin and evolution of the universe the chemical elements galaxies the evolution of stars planets and biological life Essential physical concepts are clearly and carefully explained at the introductory college level Related concepts from chemistry geology and biology are organized and integrated into the discussions An extensive glossary is provided and mathematical detail has been deliberately kept simple to make the chapters accessible to anyone with an appreciation of science The result is stimulating exploration of the frontiers of modern science that will intrigue both amateurs and professionals

Planetary Sciences National Academy of Sciences,Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,1991-02-01 This book contains the proceedings from a workshop on planetary sciences sponsored by the Academy of Sciences of the USSR and the National Academy of Sciences The proceedings include papers written by American and Soviet scientists who

examine the current theoretical understanding of how the planets were formed and how they evolved to their present state They assess the type of observations and experiments that are needed to advance understanding of the formation and evolution of the solar system based on the current theoretical framework Star Forming Regions International Astronomical Union. Huchra,1996 *Philosophical Transactions* ,2001 Stellar Jets and Bipolar Outflows L. Errico,Alberto A. Vittone,2012-12-06 In the last few years great improvements in the study of stellar jets and bipolar outflows have been achieved both observationally and theoretically High resolution observations at various frequencies radio IR optical and X ray of these features in different types of objects have shown a large variety of morphologies at all scales often revealing contrasting symmetries which do not allow straightforward kinematic interpretations valid for all cases In particular at present it seems very difficult to give a statistical definition of what the standard properties of jets and bipolar outflows are On the theoretical side the identification of physical processes capable of producing the observed rich morphological variety of jets and bipolar outflows and supporting them over long lifetimes is still controversial Furthermore several models are actively discussed in an attempt of reaching a complete understanding of the phenomenon The workshop provided an unique opportunity for both observers and theoreticians to gather together and produce an updated and exhaustive picture of the field In addition the meeting has been enriched by the presentation of some works on jets in external galaxies This topic was focused on what people working on stellar jets could learn from colleagues working on extragalactic jets and vice versa Invited papers were prepared with the aim of giving the state of the art about scientific subjects contributed papers and some selected poster papers presented on the contrary very recent results in the various fields *Nuclear Reactions of Astrophysical Interest* Scilla Degl'Innocenti,Livio Lamia,Rosario Gianluca Pizzone,2021-07-29 **The Ages of Stars (IAU S258)** International Astronomical Union. Protostars and Planets III Eugene Howard Levy,Jonathan Irving Lunine,1993 Previous Space Science Series volumes Protostars and Planets 1978 and Protostars and Planets II 1985 were among the most timely offerings of this illustrious collection of technical works Now Protostars and Planets III continues to address fundamental questions concerning the formation of stars and planetary systems in general and of our solar system in particular Drawing from recent advances in observational experimental and theoretical research it summarizes our current understanding of these processes and addresses major open questions and research issues Among the more notable subjects covered in the more than three dozen chapters are the collapse of clouds and the formation and evolution of stars and disks nucleosynthesis and star formation the

occurrence and properties of disks around young stars T Tauri stars and their accretion disks gaseous accretion and the formation of the giant planets comets and the origin of the Solar System and the long term dynamical evolution and stability of the solar system Protostars and Planets III reflects the enormous progress made in understanding star and planet formation as a result of new observational capabilities and cooperative research among scientists from diverse fields As new discoveries continue to be made it will stand as an unparalleled reference for tomorrow s research **The Nature and Evolutionary Status of Herbig Ae/Be Stars** Pik Sin Thé,Mario R.
