About this book

- Provides an overview of the mechanisms, determinants and magnitude of FDI with particular emphasis on the interface with recent economic developments
- Outlines the established doctrines relating to FDI and elucidates on the newer ones to trace the nature and direction of desirable policy parameters
- Integrates FDI within most of the existing economic systems to ascertain its role in developing economies

In development literature Foreign Direct Investment (FDI) is traditionally considered to be instrumental for the economic growth of all countries, particularly the developing ones. It acts as a panacea for breaking out of the vicious circle of low savings/low income and facilitates the import of capital goods and advanced technical knowhow. This book delves into the complex interaction of FDI with diverse factors. While FDI affects the efficiency of domestic producers through technological diffusion and spill-over effects, it also impinges on the labor market, affecting unemployment levels, human capital formation, wages (and wage inequality) and poverty; furthermore, it has important implications for socio-economic issues such as child labor, agricultural disputes over Special Economic Zones (SEZ) and environmental pollution. The empirical evidence with regard to most of the effects of FDI is highly mixed and reflects the fact that there are a number of mechanisms involved that interact with each other to produce opposing results. The book highlights the theoretical underpinnings behind the inherent contradictions and shows that the final outcome depends on a number of country-specific factors such as the nature of non-traded goods, factor endowments, technological and institutional factors. Thus, though not exhaustive, the book integrates FDI within most of the existing economic systems in order to define its much-debated role in developing economies. A theoretical analysis of the different facets of FDI as proposed in the book is thus indispensable, especially for the formulation of appropriate policies for foreign capital.

was the development of a free trade area in Central and Eastern Europe which improved market accessibility. However, to date, these relations have been little explored theoretically. The book examines foreign investments in different transition countries from both a theoretical and an empirical perspective. It analyzes changes in the choice of location by foreign investors in nineteen CEE countries between 1992 and 2015 and shows that it is linked to the removal of intra-regional trade barriers. The findings suggest that regional integration increases the incentives for multinationals to invest in the participating countries, especially in those with larger markets and lower production costs.

International Trade, Economic Development and National Welfare Kausik Gupta, Jayanta Kumar Dwivedi, 2023-03-31. This book presents a comprehensive analysis of contemporary issues in international trade and economic development. Emphasising the significance of economic development within policymaking, the book covers important issues like the provisioning of public goods, its implication in a liberalised regime, crime and corruption, skilled/unskilled wage inequality, income distribution, and unemployment, environmental regulation, and role of educational capital and informal sector. The volume deals with the impact that different aspects of international trade and investment are likely to have on the above-mentioned areas. The essays, written to honour the memory of Professor Sarbajit Chaudhuri, also examine topics that focus on public policy related to immigration of skilled workforce, political resistance, and political compulsions that a democratic government might face in keeping with its commitment to tariff reforms, gender wage gap, and issues related to globalisation, income distribution, and unemployment. The book will be of invaluable interest to postgraduate students, scholars, and researchers of development economics, international economics, and labour economics, and to those working on theoretical research on applications of general equilibrium trade models in developing countries.
