## **Driving Climate Change Cutting Carbon From Transportation:**

*Driving Climate Change* Daniel Sperling, James S. Cannon, 2010-07-26 Climate change is one of the greatest challenges facing global society. The debate over what to do is confounded by the uncertain relationship between increasing greenhouse gas emissions and climate change and the impact of those changes on nature and human civilization. *Driving Climate Change* will provide professionals and students alike with the latest information regarding greenhouse emissions while presenting the most up to date techniques for reducing these emissions. It will investigate three broad strategies for reducing greenhouse gas emissions: 1. reducing motorized travel, 2. shifting to less energy intensive modes, and 3. changing fuel and propulsion technologies. Findings will be presented by the leaders in the field with contributions from professors, researchers, consultants, and engineers at the most prominent institutions: commercial, academic, and federal, dealing with environmental research and policy. Includes a comprehensive evaluation of current industrial practice. Provides technologically sound and manageable techniques for engineers, scientists, and designers. Incorporates guidelines for a sustainable future. **Driving**

**Climate Change** Daniel Sperling, James Spencer Cannon, 2007 **Climate Change Adaptation for Transportation Systems** Michael A.P. Taylor, 2020-09-29 *Climate Change Adaptation for Transportation Systems* examines the international state of knowledge on climate change and weather and their potential impacts on the planning, design, and serviceability of transportation networks. The book describes alternative frameworks for adapting to climate change in the planning, provision, and management of transportation systems. It discusses methods and models for including climate and weather factors in planning and design for use in transportation asset systems under risk and uncertainty. Giving specific attention to road, rail, ports, and harbors, the book provides users with the tools they need in decision making approaches where there is uncertainty. Examines the impact of climate change and extreme weather on the performance and serviceability of transportation assets. Explores the issues, methods, frameworks, models, and techniques for assessing transportation systems performance, including considerations for climate and the environment. Provides case studies from around the world to illustrate methods covering a wide range of climatic conditions, considerations, and approaches for transportation planners. *Transport Moving to*

*Climate Intelligence* Werner Rothengatter, Yoshitsugu Hayashi, Wolfgang Schade, 2011-03-31 Transportation contributes to roughly a fifth of greenhouse gas emissions and as a growing sector of the economy its contribution to climate change if remained unchanged could even grow. This is particularly true in the developing world where the growth rates of air and ship transport are expected to exceed those of the EU and worldwide objectives to curb greenhouse gas emissions by 2050 by sixty to eighty percent could be placed in serious jeopardy. This book addresses the key issues of controlling transportation growth and identifying and implementing measures that would significantly reduce the emissions of greenhouse gases from transport while maintaining its vital role in generating prosperity and mobility for future generations. This book describes the challenge that transport constitutes today as well as its role in the future for climate policy. It will discuss and provide hands

on suggestions for transportation policy that will mitigate the greenhouse gas emissions from transport The book is organized into five parts Part One presents an overview of transport and climate policy in the context of the recent economic crisis Part Two examines the problems and proposed solutions for curbing emissions from transport in industrialized countries while Parts Three and Four deal with the developing world with a particular focus on India and China Part Five discusses tested solutions and provides policy recommendations making this book of interest to a broad audience of both policy makers and academics concerned with the role of transport in reducing global climate change

*Reducing Carbon Emissions from Transport* Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2006-08-07 The Committee's report examines the challenges involved in efforts to reduce carbon emissions from the UK transport sector and makes recommendations to improve future progress as part of its overall priority for the current Parliament of focusing on climate change issues Topics discussed include the Government's strategic priorities measures to reduce carbon emissions from road transport trains water freight and aviation emissions from developing economies the future price and availability of oil This volume contains a range of oral and written evidence taken by the Committee in the course of its inquiry including contributions from officials from the Department for Transport Transport for London the Environment Agency Transport 2000 and Sustrans as well as from environmental groups and from representatives from the motoring aviation rail freight transport and shipping industries

*Moving People* Peter Cox, 2010-03-11 The local and global environmental impacts of transport are more apparent than ever before Moving People provides an attention grabbing introduction to the problems of transport and the development of sustainable alternatives focusing on the often misunderstood issue of personal mobility as opposed to freight Re-assessing the value and importance of non motorized transport the author raises questions about mobility in the face of climate change and energy security particularly for the developing world Featuring original case studies from across the globe this book is essential for anyone studying or working in the area of environmental sustainability and transport

policy      **Sustainable Transportation** William R. Black, 2010-01-04 During the last two decades sustainability has become the dominant concern of transportation planners and policymakers This timely text provides a framework for developing systems that move people and products efficiently while minimizing damage to the local and global environment The book offers a uniquely comprehensive perspective on the problems surrounding current transportation systems climate change urban air pollution diminishing petroleum reserves safety issues and congestion It explores the full range of possible solutions including applications of pricing planning policy education and technology Numerous figures tables and examples are featured with a primary focus on North America      **IATSS Research** ,2007      *ITF Round Tables The Cost and Effectiveness of Policies to Reduce Vehicle Emissions* International Transport Forum, Transport Research Centre, 2008 Transport sector policies already contribute to moderating greenhouse gas emissions from road vehicles They are increasingly designed to contribute to overall societal targets to mitigate climate change While abatement costs in transport are relatively high there are plausible arguments in favour of further abatement in this sector Fuel taxes are a good instrument Fuel economy standards are potentially justified because of the limited performance of markets in terms of improving fuel economy The empirical basis to decide upon combinations of fuel economy standards and fuel taxes however remains weak This Round Table investigates the effectiveness and costs of various mitigation options in road transport and discusses the distribution of abatement efforts across sectors of the economy      Transportation Infrastructure Marlon Gary Boarnet, 2009 Transportation infrastructure is one of the most pressing issues for planners and communities today In the short term stimulus funding is being used to create jobs and fix critical systems in the long run communities are struggling to determine how best to restructure transport networks to encourage better land use and to foster reductions in greenhouse gas emissions This report edited by Marlon G Boarnet was compiled with an eye to the urgency and severity of the challenges that we now face Some of the leading researchers scholars and practitioners in transportation planning put forth fresh best practices and visionary ideas Contributors include Robert Cervero Ellen Greenberg Robert Puentes Daniel Sperling and Petra Todorovich Also here is the discussion among three big city planning directors William Anderson San Diego Barbara Sporlein Minneapolis and Harriet Tregoning Washington D C that took place at APA s 2009 National Planning Conference in Minneapolis      *Bulletin de L'Institut International Du Froid* ,2006      Human Development Report 2007/2008 United Nations Development Programme, 2007-11-15 Human development is about putting people at the center of development It is about people realizing their potential increasing choice and enjoying the freedom to lead the lives they value Created in 1990 the Human Development Report has explored themes including gender equity democracy human rights globalization cultural liberty and water scarcity The past years have witnessed the emergence of a growing consensus on climate change Governments across the world have seen the warning signs The science linking global warming to human activity is unequivocal The economic case for action is compelling the costs of inaction will heavily outweigh the costs of action Yet the

politics lags behind the science and the economics Collectively the world's governments are failing to act with the urgency demanded by the scale of the threat The window of opportunity for avoiding dangerous climate change is closing fast This year's Human Development Report explains why we have less than a decade to change course and start living within our global carbon budget It explains how climate change will create long run low human development traps pushing vulnerable people into a downward spiral of deprivation Because climate change is a global problem with global causes and effects it demands a global response with countries acting on the basis of their historic responsibility and capabilities Access ,2012
