Seminar on Potential Theory II H. Bauer, 2006-11-15

**The Advancement of International Law** Charles

Leben, 2010-10-15 Any talk of the advancement of international law presupposes that two objections are met The first is the realist objection which observing the state of international relations today claims that when it comes down to the important things in international life war and peace and more generally power politics among states no real advancement has been made international society remains a society of sovereign states deciding matters with regard solely to their own best interests and with international law all too often being no more than a thin cloak cast over the precept that might is right Against this excessive scepticism stands excessive optimism international law is supposedly making giant strides forward thanks especially to the tremendous mass of soft law generated by international organisations over the past sixty years and more By incautiously mixing all manner of customs treaties resolutions and recommendations a picture of international law is painted that has little to do with the real world This book is arranged into three sections The first purports to show from the specific example of international investment law that the past half century has seen the invention of two genuinely new techniques in positive law state contracts and transnational arbitration without privity This is advancement in international law not because the techniques are good in themselves one may well think them bad but because they have introduced legal possibilities into international law that did not exist heretofore The second section examines the theoretical consequences of those new legal techniques and especially the way they affect the theory of the state The third widens the field of view and asks whether European law has surpassed international law in a move towards federalism or whether it represents a step forward for international law These reflections make for a clearer theoretical understanding of what constitutes true advancement in international law Such an understanding should give pause both to those who argue that hardly any progress has been made and to those who are overly fanciful about progress

*Fractional Programming* I.M. Stancu-Minasian, 2012-12-06

Mathematical programming has know a spectacular diversification in the last few decades This process has happened both at the level of mathematical research and at the level of the applications generated by the solution methods that were created To write a monograph dedicated to a certain domain of mathematical programming is under such circumstances especially difficult In the present monograph we opt for the domain of fractional programming Interest of this subject was generated by the fact that various optimization problems from engineering and economics consider the minimization of a ratio between physical and or economical functions for example cost time cost volume cost profit or other quantities that measure the efficiency of a system For example the productivity of industrial systems defined as the ratio between the realized services in a system within a

given period of time and the utilized resources is used as one of the best indicators of the quality of their operation Such problems where the objective function appears as a ratio of functions constitute fractional programming problem Due to its importance in modeling various decision processes in management science operational research and economics and also due to its frequent appearance in other problems that are not necessarily economical such as information theory numerical analysis stochastic programming decomposition algorithms for large linear systems etc the fractional programming method has received particular attention in the last three decades     Papers Arthur Ranum,1929     **Lectures on N-Dimensional Quasiconformal Mappings** Jussi Väisälä,1971     **Lectures on the Applications of Sheaves to Ring Theory** Klaus Keimel,Silviu Teleman,1971 From September 1970 through May 1971 Tulane University organized a special year long program in the theory of noncommutative rings and operator algebras Visitors from various institutions of the U S A and abroad contributed to a series of lectures in which they covered recent advances in their own field of specialty These notes contain these lectures to the extent that they have not appeared elsewhere This volume presents the lectures on applications of topology to ring theory through the representation of rings by sections in sheaves     *Lectures on P-Divisible Groups* M. Demazure,1972-12-31     *Hope in the Ecumenical Future* Mark D. Chapman,2017-09-20 This book offers fresh insights into the contemporary state of Ecumenism Following the election of Pope Francis there has been a significant thaw in ecumenical relations and there are grounds for thinking that this will continue into the future The twelve chapters written both by experienced ecumenical theologians as well as younger scholars that have been gathered together in this collection offer one of the first detailed assessments of the impact of Francis papacy on ecumenical dialogue Drawing on ecumenical methodology as well as many practical examples and illustrations the authors discuss the developments in culture and missiology as these affect the practice of ecumenism particularly in response to theologies of hope as well as inter religious dialogue and pluralism What emerges is a clear sense of hope for the future in a rapidly changing world and even a sense of optimism that real ecumenical progress might be made     Topics in Stability and Bifurcation Theory David H. Sattinger,1973-01-15     Proceedings ,1972     *Representations of Permutation Groups I* A. Kerber,1971-01-01     **Lectures in Set Theory** Thomas J.
