

START&STOP SYSTEM

(for versions/markets where provided)

FOREWORD

The Start&Stop device automatically stops the engine each time the vehicle is stationary and starts it again when the driver wants to move off.

This improves the efficiency of the vehicle by reducing fuel consumption, the emission of harmful gases and noise pollution. The system is activated each time the car is started.

OPERATING MODES

Engine cut-out mode

With manual transmission

With the vehicle stationary, the engine cuts out with the gearbox in neutral and the clutch pedal released.

fig. 118

FRANCESCO

With Dualogic gearbox

(for versions/markets where provided)

The engine cuts out if the car stops with the brake pedal pressed.

This condition can be maintained even if the brake pedal is not pressed, if the gear lever is in position N.

NB: The engine can be stopped automatically only after a speed of about 10 Km/h is reached, to prevent the engine from being repeatedly stopped when driving at walking pace.

The engine being stopped is signalled by the warning light fig. 118 on the instrument panel, depending on the configuration.

Engine restarting mode

With normal transmission

Press the clutch pedal to allow the engine to be restarted.
