*Digital Literacies for Learning* Allan Martin, Dan Madigan, 2006 In the 21st century digital tools enable information to be generated faster and in greater profusion than ever before to the point where its extent and value are literally beyond imagining Such quantities can

only be meaningfully addressed using more digital tools and thus our relationship to information is fundamentally changed. This situation presents a particular challenge to processes of learning and teaching and demands a response from both information professionals and educators. Enabling education in a digital environment means not only changing the form in which learning opportunities are offered but also enabling students to survive and prosper in digitally based learning environments. This collection brings together a global community of educators, educational researchers, librarians and IT strategists to consider how learners need to be equipped in an educational environment that is increasingly suffused with digital technology. Traditional notions of literacy need to be challenged and new literacies including information literacy and IT literacy need to be considered as foundation elements for digitally involved learners. Leading international experts from the USA, Canada, Australia, New Zealand, South Africa, Mexico and throughout Europe contribute to the debate and Hannelore Rader, Librarian and Dean of the University Libraries, University of Louisville, Kentucky provides the foreword. The book is in two parts. In Part 1, Literacies in the Digital Age, the contributors analyse how digital technologies have enabled transformative change in the ways in which learning can be constructed and discuss the nature of the new literacies that have emerged in this new virtual and e-learning environment. In Part 2, Enabling and Supporting Digital Literacies, the contributors go on to consider the ways in which digital literacies can be made available to learners and how these literacies are being relocated in a more student-centred environment within the broader perspective of learning. Readership: This book takes the issues raised in the successful *Information and IT Literacy* also co-edited by Allan Martin into a broader context. It is essential reading for all information professionals and educators involved in developing strategies and practices for learning in a digital age.

*Trick Questions* delves into the fascinating world of deceptive questioning, offering readers a comprehensive exploration of how these linguistic tools shape our decision-making and interpersonal dynamics. This thought-provoking book uncovers the cognitive mechanisms that make trick questions effective, drawing from extensive research in cognitive psychology, neuroscience and behavioral studies. By examining how these questions exploit natural human biases and social conditioning, the book provides valuable insights into maintaining authentic communication while protecting oneself from manipulation.

The book's progression is methodically structured around three key areas: understanding the psychology behind deceptive questions, exploring social manipulation dynamics, and developing defensive strategies. Through real-world examples from business negotiations, legal proceedings, and everyday interactions, readers learn to identify various types of trick questions, including loaded questions and false dichotomies. What makes this work particularly valuable is its practical approach to complex psychological concepts, making them accessible through relatable scenarios and applicable frameworks. Bridging the gap between theoretical understanding and practical application, the book serves both professionals in communication-intensive fields and general readers seeking to enhance their critical thinking skills. It stands out for its comprehensive examination of how trick questions have evolved from ancient philosophical dialogues to modern marketing techniques, while maintaining a strong focus on ethical communication practices in today's information-rich environment.
